Storage Conditions for Aurubis Finland Material

Aurubis Finland products are subject to the following periods of time for which the specified properties are maintained.

Storage conditions: dry and dust-free conditions in an undamaged packing.

Mechanical properties: Mechanical properties for the products are unaffected under the above mentioned conditions.

Oxidation: Oxidation should not occur on passivated surfaces or on surface protected with inhibitor plastic in the above mentioned storage conditions for up to six (6) months.

The above mentioned periods of time do not apply for material which has been further processed. Further processing has to be taken into account when evaluation the effect on mechanical properties and surface oxidation.
